

Start here

Thanks for doing this. Read this page, then open packet 1. Two minutes.

Everything is attached. Do packet 1 first, send its CSV back, then carry on.

What you're doing

Reading text and writing down what you see. No software, no code, nothing to install. There's no right answer you're meant to find. What you honestly see **is** the result.

Stop and start whenever you like

You do not have to do a packet in one sitting. Answer a few, put it down, come back. Nothing is timed, and picking it up an hour later does not hurt the work at all.

Five rules

1. **Do them in order: packet 1, then 2, then 3.** Packet 1 is the short one, 20 minutes. Doing them out of order would change how you read them, so this one matters.
 2. **Work on your own.** Don't say anything about a packet to the other reader, not even what it's about, until you have both sent that one back.
 3. **Go in order.** Top to bottom.
 4. **"I can't tell" is a real answer.** Every task has one. Use it whenever it's true.
 5. **Don't look anything up.** No searching, no asking an AI. We want an ordinary careful reader.
-

Each packet

A PDF to read and a CSV to type your answers into. The CSV opens in Excel, Google Sheets or Numbers. Send the CSV back when you're done and keep a copy.

The CSV is your bookmark. The first empty row is where you stopped.

If something's wrong with a task

Say so in the notes column, or at the bottom of the answer sheet. "Item 14 was cut off so I couldn't tell" is genuinely useful to us. Much better than guessing.
